# INTRODUCTION TO THE NET PROMOTER SCORE®

## ABOUT NET PROMOTER SCORE®

Over the past decade, there have been substantial shifts in tourism that have resulted in the growing importance of the delivery of outstanding travel experiences. High satisfaction with travel experiences is critical to achieving increased visitor spending, longer stays, repeat visits and positive word-of-mouth referrals. Destination advocacy, either face-to-face or through electronic media, is critical in attracting first time visitors to British Columbia.

To address these shifts, a key goal of Destination BC's corporate strategy is for British Columbia to become the most highly recommended destination in North America. The Net Promoter Score® (NPS®), developed by Frederick Reichheld and Bain & Company in 2002, is a simple metric that can be used to measure the intention to recommend/refer a travel destination, organization or sector and is also an

indicator of overall satisfaction with the travel or customer experience. Therefore, Destination BC actively encourages its tourism partners (e.g. businesses, communities, sectors) to measure and increase their NPS. This document provides an introduction to what the NPS is and how it is currently being used in the tourism industry.

\*Net Promoter, NPS and the NPS-related emoticons are registered service marks, and the Net Promoter Score and Net Promoter System are service marks, of Bain & Company, Inc., Satmetrix Systems, Inc. and Fred Reichheld.

## BACKGROUND OF NPS

More than a decade ago, Frederick Reichheld and his research team set out to determine a simple and practical indicator of what customers were thinking and feeling about organizations they did business with. The research, published in a 2003 Harvard Business Review article<sup>2</sup>, identified that one question was most effective in determining loyalty and predicting growth. The question is:

*How likely is it that you would recommend [Company X/destination X] to a friend or colleague?*

Not at all Likely

Extremely Likely

Research also found that an 11-point response scale with anchors of 0 (not at all likely) and 10 (extremely likely) is most effective for this question. Responses are then categorized into three groups:

- Detractors (scores of 0 to 6): Unhappy visitors, unlikely to tell others to visit and might even damage the reputation of a destination through negative word of mouth.

- Passives (scores of 7 or 8): Marginally satisfied visitors not excited enough to tell others about their travel experience.
- Promoters (scores of 9 or 10): Loyal enthusiasts, likely to return and rave about their travel experience.

NPS is calculated by subtracting the percentage of detractors from the percentage of promoters.

<sup>2</sup> Reichheld, F. F. (2003). The One Number You Need to Grow. Harvard Business Review, 81 (12), 46-55.

Since 2003, several books have been published about the NPS. The authors point out that hundreds of businesses in a variety of industries have adopted NPS, illustrating that customer service is at the core of business operations. The NPS helps organizations measure customer loyalty and engagement, and utilize consumer feedback (via NPS customer surveys) to drive operational decisions to improve consumer experiences.

**Since the development of the NPS, published reports outside of the tourism and travel industry have summarized the following key findings:**

- Organizations that use the NPS have sustained higher revenues and referrals.
- Customers who are promoters spend more through repeat business and generate new business through referrals. Promoters also cost businesses less in customer service.
- It is worthwhile to understand the characteristics of promoters, passives and detractors and to distinguish between impressions from a single interaction and overall loyalty to the organization.
- NPS is most useful in industries where there is substantial competition

and customers have the option of choosing other businesses.

- Cultural response bias has been detected in customer satisfaction survey questions (including NPS) when results are compared across countries and geographic regions. Some businesses have reduced this bias by introducing country-specific correction factors<sup>3</sup>.
- It takes time and hard work to establish reliable, trustworthy measurement, and to understand what the scores mean and create a feedback system<sup>4</sup>.
- The NPS is sensitive to research methodology and requires careful project planning. Organizations should:
  - Ensure all customers, and not just those that have issues or are outspoken, are surveyed
  - Document methodology and use a consistent approach over time, in order to identify shifts in the proportions of promoters and detractors
  - Attempt to eliminate sample bias by doing everything possible to obtain high response rates

# NPS IN THE TOURISM INDUSTRY

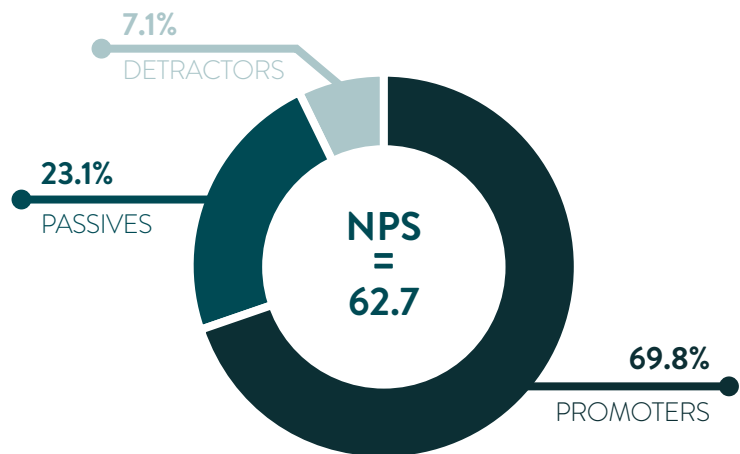

The intention to recommend a travel destination, reported by the NPS, is a proxy measure of overall satisfaction with the travel experience. Satisfaction with the travel experience and the intention to recommend greatly increase the likelihood of a return visit to British Columbia. Word of mouth advocacy, either face-to-face (or other one-to-one means e.g. telephone, or email) or various electronic and social media platforms (sometimes referred to as e-word of mouth), is critical for attracting first time visitors to BC. NPS is regarded by researchers as the question that best predicts the future growth of customer centric businesses, like those in the tourism industry.

**Overall, the advantages of tracking NPS for the tourism industry include:**

- One question with a single score that is fairly easy to understand and calculate summarizes the visitor experience.
- It is possible to track over time.
- Measuring NPS raises awareness of the quality of visitor experiences and emphasizes the importance of customer service and the visitor experience.
- The results can be linked with social media behavior and business results.
- It is possible to compare results for a destination or business against key competitors (where comparable NPS measures are available).

**For these reasons, adoption of the NPS as a key performance indicator is becoming more and more common for tourism organizations. In BC, tourism organizations that measure and track NPS include:**

- Destination Canada
- Destination BC
- Tourism Vancouver, Tourism Whistler, Tourism Kamloops, and Tourism Richmond
- The Canadian Ski Council with the Canada West Ski Areas Association and RRC Associates at participating British Columbia ski resorts

BC NET PROMOTER SCORE (2013)

In addition, numerous ski resorts and destination communities across the United States have been tracking NPS over the past several years.

**Published NPSs for tourism destinations include:**

- Destination Canada's Global Tourism Watch studies measure the NPS for Canada through surveys in key markets around the world<sup>5</sup>
- New Zealand's Visitor Experience Monitor tracks the NPS for international visitors<sup>6</sup>
- Destination British Columbia tracks NPS annually, targeting an improvement of 0.5 points per year
- Steamboat Springs, Colorado has measured NPS since 2010<sup>7</sup>.
- Bend, Oregon measured NPS over a five year period<sup>8</sup>
- NPS was measured for Australian destinations in 2006 with scores ranging from -55 (Adelaide) to 80 (Broome)<sup>9</sup>

## VARIANCES IN NPS RESULTS

Research has shown that NPS in the tourism industry can vary by:

- Market of origin (this could be a result of actual experience differences, cultural differences or different interpretation of response scales)
- Repeat vs. first time visitors
- Household composition (e.g. households with or without children, empty nesters)
- Community length of stay (day vs. overnight visitors)
- Primary trip purpose (business vs. leisure trips)
- Destination characteristics (factors) that drive destination selection
- Seasonal visits, probably related to primary trip activity (e.g. ski/winter vs. summer)

## MEASURING NPS IN BC COMMUNITIES

Destination BC has developed a guide, “Measuring NPS in BC Communities.” The guide provides details on recommended approaches for measuring NPS at a community level, which can be adapted to regions, sectors, or business level. A summary of this guide is available in [Destination BC’s Learning Centre](#).
